

CORONAVIRUS AT A GLANCE

COVID-19 SYMPTOMS MAY DEVELOP WITHIN 14 DAYS OF EXPOSURE AND INCLUDE*:

Cough

Fever

Shortness of breath

TRANSMISSION AND DIAGNOSIS

The virus that causes COVID-19:

- Usually spreads from close person-to-person contact through respiratory droplets from coughing and sneezing.
- May also spread through airborne transmission, when tiny droplets remain in the air even after the person with the virus leaves the area.
- Can only be diagnosed with a laboratory test.

Wash your hands frequently and thoroughly, using soap and water for at least 20 seconds. Use alcohol-based hand sanitizer if soap and water aren't available.

Cough or sneeze into a tissue or flexed elbow, then throw the tissue in the trash.

Avoid touching your eyes, nose or mouth with unwashed hands.

Avoid close contact with people who are sick, sneezing or coughing.

Stay home when you are ill.

Clean and disinfect surfaces and objects that people frequently touch.

Only wear a mask if you have respiratory symptoms or are caring for someone with respiratory symptoms.
